

City of Long Beach

Projects In the Works

The Long Beach Department of Public Works continues to address our important infrastructure needs. While these projects vary in size, all of them are extremely significant.

Listed below are descriptions of upcoming Public Works projects that will be before the City Council at the January 22, 2014 City Council Meeting.

1. Installation of new fuel pumps at City of LB Vehicle Maintenance Facility

Project Description: Flooding from Superstorm Sandy severely damaged diesel and gasoline pumps as well as the fuel management system at the City Garage. This equipment will be removed and new dispensers, which will be elevated to make them more resilient and in conformance with hazard mitigation guidelines to protect against damage from future flooding, will be installed. Funding is being provided through a public assistance grant by FEMA.

2. Closing out of Phase 1 of Boardwalk reconstruction & initiation of Phase 2

Project Description: The City will be amending the current agreement with LiRo Engineering to include engineering and design services needed to support and complete the entire boardwalk and bathroom reconstruction. Funding is being provided through a public assistance grant by FEMA.

**REBUILDING
STRONGER
SMARTER &
SAFER**

3. Replacement of obsolete equipment in Water Pollution Control Plant Digester Building

Project Description: The City will be purchasing and installing a new Duplex Plunger Pump and an accompanying in-line grinder (to protect the new plunger pump from possible damage when unsuitable objects are flushed through the system) to replace the old Duplex Pump, which had been in service since 1950. This repair was planned and budgeted for through the City's Capital Program.

4. Rehabilitation of City Wastewater Treatment Plant & Roosevelt Blvd. Sewage Pump Station

Project Description: Due to the severe damage sustained as a result of Superstorm Sandy, additional work is required to restore these facilities to their proper condition.
